Precipitation probability					
30%	30%	70%	60%	30%	20%

Forecast for Thursday 06 May 2021

Weather: Sunny spells and scattered showers continuing through the day, heavy at times, with a mixture of hail and rain on the lower slopes and either hail or snow above around 400-600m. There is also a chance of the odd rumble of thunder and flash of lightning. A temporary covering of snow/hail is likely on some paths, this lasting through much of the day above around 800m. Some, mostly brief, sunny spells are likely in-between the showers with longer drier periods developing into the evening.

Chance of cloud free mountain/hill tops above 800m: 60% but 30% Snowdon Range until late morning.

Visibility: Excellent visibilities outside of the showers but sudden deteriorations as hail/snow showers pass through. Distant hills may be visible one moment, whereas a few minutes later you may not be able to see more than a few hundred meters. Cloud bases will vary considerably with occasional cloud down to 600-800m as showers pass through and more general cloud above 600m across the Snowdon Range through the morning. This will often give very poor visibilities on the summits, however some summits may temporarily clear at times through the afternoon.

Freezing Level*	500m	500m	500m	600m	700m	700m	600m

**Level above which ground is expected to be frozen/snow is expected to settle.*

Meteorologist's View

Unusually cold conditions for May will continue, giving a significant wind chill, especially on the higher ridges and summits. Appropriate winter clothing and footwear is recommended, particularly if you are planning on going to the summits. Frozen ground and a covering of snow or hail is likely on the higher paths, with icy surfaces expected.

Forecast for Friday 07 May 2021

Weather: Showers through the morning, mainly affecting the Snowdon Range and Carneddau and still wintry above around 600m. Turning mostly dry through the afternoon with any showers becoming isolated and lengthier periods of sunshine developing. A dry evening with increasing high level cloud.

Maximum wind: West or Northwest 10-15 mph gusting 20-25 mph.

Chance of cloud free mountain/hill tops above 800m: 70% during the morning, though 40% Snowdon Range and northern parts of Snowdonia first half of the morning. Becoming 90% or greater through the afternoon.

Visibility: Excellent visibilities for most of the day but nearby hills disappearing from view as showers move through during the morning. Patches of cloud above 700m in the north of the park through the morning, often giving very poor visibilities on the summits here. Cloud bases lifting above most summits by the middle of the afternoon to leave fine conditions into the evening.

Temperature: **Valleys:** Minus 3 Celsius rising to plus 10 Celsius
At 800m: Minus 1 Celsius rising to plus 2 Celsius.
Freezing level: 750m rising to 950m by mid-afternoon and above all summits by the evening.
